

November 11, 2021, Joinville, Brazil -- Injequally Industria LTDA, a Brazil-based injection molding company in São Paulo and partner of Viking Plastics in Pennsylvania has expanded, adding a plant in Joinville.

The new 2,000-square-meter Joinville plant is the second location for Injequally. The plant will produce plastic refrigerator components for Whirlpool, a multinational appliance company.

“We worked alongside Whirlpool on this project, and we’re honored to be among their trusted partners. This plant produces parts that will be in refrigerators across the globe. The addition of this facility is projected to increase Injequally’s business by 30%” said Fernando Esteves, Injequally’s Director of Development.

Injequally’s last expansion came in 2019, when the plastic injection molding company added five injection molding machines to their São Paulo plant, bringing their total at the plant to 16 machines.

Founded in 2003, Injequally Industria LTDA is a partner of Viking Plastics in Corry, Pennsylvania USA. Injequally molds tight-tolerance products for automotive, consumer and industrial markets. The company is ISO 9002 certified and is working toward ISO 14001 certification in 2021.
